Microsoft Azure

Container lassen sich ebenso in Microsoft Azure verwenden. Die Verbindung zum Azure Container läuft über SSH (erzeugten public und private keys von puttygen) und einem definierten Port. Azure unterstützt Kubernetes und Swarm.

```
ssh dockeruser@ipaddress -p 2200 -L 22375:127.0.0.1:2375
```

The screenshot shows the Microsoft Azure portal interface. On the left sidebar, the 'New' button is highlighted with a red box. In the main area, the 'Containers' category is highlighted with a red box. On the right, the 'FEATURED APPS' section is visible, with 'Azure Container Service' highlighted by a red box. Below it, other featured apps like 'DC/OS on Azure', 'RancherOS', and 'Docker on Ubuntu Server' are listed.
