

CSM Proxy™

The Ultimate Gateway to the Internet and Application Level Firewall

More and more companies and individuals are connecting to the Internet as their gateway to the world of fast and unlimited communication. With the growing number of Internet enabled computers, the need for private networks, gateways and security is growing.

Now by connecting your internal network, intranet, or even a single PC, to the Internet through **CSM Proxy™**, you can:

- ▶ Use un-official IP-addresses in your private network when your network provider gives you only a few, limited number of IP-addresses. Connect your entire LAN through a single IP-address.
- ▶ Caching Servers have the advantage of less network traffic, which results in lower networking costs. Reduce bandwidth costs up to 60%. Instruct **CSM Proxy™** to get updated pages prior to employees arriving.
- ▶ Control what your users can use and where they may connect. Extensive controls over groups and users of the gateway, where and when they may connect to and what client application may be used.
- ▶ Firewall protection to protect your internal resources. Prevent un-authorized intruders from reaching your internal LAN and/or resources.
- ▶ Security for data over an Internet connection (Virtual Private Network). Secure Sockets Layer encrypted and protected communications - over the Internet - when using **CSM Proxy™** from one site to another.
- ▶ Extremely easy configuration and administration, without the need of a networking guru in house to administer your Internet gateway.

◀ IP Gateway

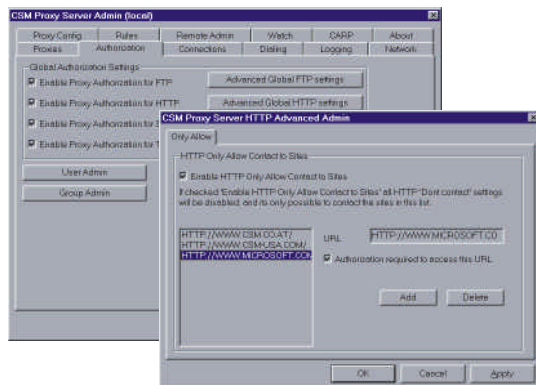

◀ Caching Server

◀ Access Control Server

◀ Firewall

◀ Virtual Private Network

◀ Easy to Use

CSM Proxy™ Family:

The **CSM Proxy™ Standard Edition** is designed for schools and small networks and offers all the basic features needed for secure Internet access.

The **CSM Proxy™ Plus Edition** is designed for small to medium business and has an extended feature-list with more control over the Internet traffic.

The **CSM Proxy™ Enterprise Edition** is designed for larger enterprises and offers all the features from the **CSM Proxy™ Plus** with additional Virus Scanning, Filtering, Active-X and JAVA Blocking.
